### ABSTRACT

Recent data shows a declining performance in Egyptian foreign trade of agricultural sector especially by increased the Egyptian agricultural import, which leads to increase the deficit of agricultural trade balance. Agricultural processed products is consider one of main source of agricultural trade balance deficit. As a result, it is necessary to study the main factors affecting the Egyptian demand of foreign agricultural processed products to determine the most important factors and determine the possible solution in future. It is clear through the research result of the factors affecting the quantity of the Egyptian fats and oil imports, that their

main factors are determined by the total production of the Egyptian fats and oil, the imports price and the consumption of oils and fats and in the total exports of USA from oil and fats. Moreover, it is obvious from the factors affecting the demand in Egyptian market that the price of the USA fats and oil is considered the main factor in most of these markets. Moreover the effect of free trade agreement and European Egyptian agreement were significant positive for increase the Egyptian demand of foreign oils and fats. So it is important to use some possible solution for decreasing these positive impact of these factors on Egyptian demand for foreign oils and fats for developing countries without being against the activation of these agreements. It is important to control the national consumption and increase the total production of oil and fats.
